WHMCS DOMAIN REGISTRAR CONFIGURATION

Prerequisite

- Please ensure your WHMCS installation is correct and operational
- Registration with HEXONET at www.hexonet.net is required, your username and password at HEXONET will be used by the module
- Your HEXONET account must be funded and be positive at all times for registrations, renewals, and transfers to be properly executed.

Module Configuration – Using WHMCS Interface

- Login to your WHMCS installation with an Administrative Account via the web control panel provided.
- Navigate to SETUP > Domain Registrars and using the Choose Registrar Module dropdown select “Ispapi”.
- Enter your HEXONET Username and Password and save.
- Check the TestMode option if you wish to test your installation before going live.

Module Configuration – Using Download Zip File

- Please unzip the downloaded file and carefully review the README.TXT file.
